

## Dräger X-plore® 2100 Half Mask

The Dräger X-plore® 2100 is the reusable alternative to disposable dust masks. The Dräger X-plore® 2100 is the ideal solution for people working frequently in dusty environments. Its replaceable filters provide protection against solid and liquid particles. This half mask offers the perfect combination of comfort, safety, and cost-effectiveness.

## Benefits

---

### Excellent tight fit

The mask body of the X-plore® 2100 offers a first-class, tight fit with clearly reduced leakage figures, compared to conventional filtering facepiece respirators.

---

### Large-Capacity filters

During frequent and prolonged use in dusty environments, the practical replaceable FMP2 and FMP3 filters protect with high filter performance and low respiratory resistance against solid and liquid particles/aerosols.

---

### High level of wearable comfort

Optimal wearing comfort is achieved by two available high-quality materials, EPDM and silicone, in two sizes.

---

### Very economical

The replaceable filters have a long service life. The easy to replace, and low-cost filters make for an economic purchase.

---

### Comfortable breathing zone climate

The exhalation valve is located at the lowest point in the mask, which helps to effectively remove exhaled moisture and perspiration.

---

### Easy donning and doffing

The one-piece head harness with two adjustment points and anti-slip headgear ensures fast and trouble-free donning and doffing, in addition to very good pressure distribution.

---

### "Drop-down" harness

The mask can be removed from the face without removing head protection, by simply unclasping the neck fastener. While in the drop-down position, the face-seal portion of the mask remains against the body, protecting against contamination.
